CYBER SECURITY SPECIALIST PROGRAM

Introduction

Cyber Security is one of the sectors that is facing a severe shortage of skilled and qualified talent. In 2021 there was 3.5 million unfilled Cyber Security position. For candidates who are applying for these positions, fewer than one in four are even **qualified**.

3.5 million unfilled Cyber Security position by 2021

1 in 4 are Qualified

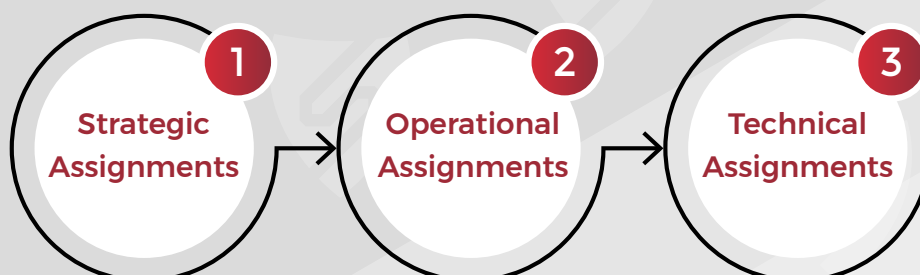

This small statistic shows that most of the candidates who want to join Cyber Security field are following the wrong approach which depend on training and online courses only. This approach will provide student with the basic Cyber security knowledge but will not provide the realistic experience that business are looking for and this **is the real gap in this field**.

Purpose of the program

The purpose of the program is to qualify candidates with all REALSTIC Cyber Security Skills and knowledge they need to have by involving them in real cyber security projects to work as CYBER SECURITY SPECILIST following a realistic approach.

Skills that you will learn during the program (Realistically)

How the program work?

- ✓ The program is following a top-down approach where candidates will learn important Cyber Security Skills implementation in real business environment.
- ✓ Its well known that any candidates learn much faster while working in real cyber security projects than while taking training or online courses accordantly we are giving our students an opportunity to join real Cyber Security Projects with guidance on how to execute real project tasks and give our students a chance to lean by experiences.
- ✓ This approach is much more effective than the normal learning path that depend on traditional training or online courses that will provide candidate with the knowledge but miss the real implementation experience.

Graduate of this program will be able to:

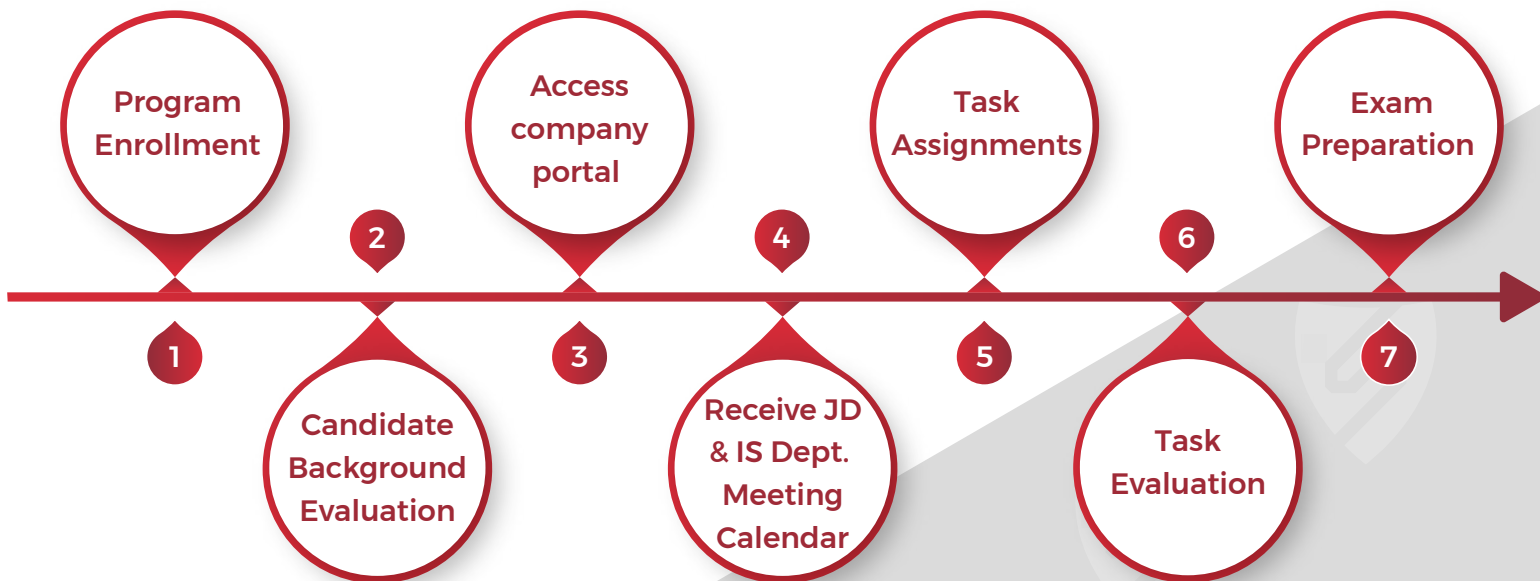

- ✓ Learn how to implement security controls to meets industry standards.
- ✓ Implement Information Security Management System (ISMS) from scratch.
- ✓ Explain methods for establishing and maintaining the security of a network, computing environment, and application.
- ✓ Apply control techniques to secure networks, operating systems, and applications.
- ✓ Conduct threat assessments and vulnerability scans to secure the assets of an organization.

Certifications

The Program will qualify candidate to pass the below certification:

- ✓ ISC2 Certified Information System Security Professional - **CISSP**
- ✓ ISACA Certified Information Security Manager - **CISM**
- ✓ ISACA Certified Information System Auditor - **CISA**

Program Phases

CANDIDATES WILL HAVE TO DO HARD WORK AND SPEND TIME SEARCHING AND SOLVING REAL BUSINESS PROBLEMS.
